GoRide Bangladesh

Product Requirements Document

Version 3.0 — Enhanced & Final

Document Type	Product Requirements Document (PRD)
Product Name	GoRide Bangladesh
Platform	Website (Phase 1) | Mobile App (Phase 2)
Version	3.0 — Enhanced from v2.2
Date	March 2026
Status	Final — Ready for Developer Handoff
Language	English (Bilingual: English & Bangla)

1. Product Overview

GoRide Bangladesh is a bilingual car rental and transport marketplace serving individuals, corporate clients, car owners, and drivers across Bangladesh. The platform is designed to be mobile-first, Bangla-friendly, and built for scale from day one.

Attribute	Detail
Product Name	GoRide Bangladesh
Type	Car rental & transport marketplace
Phase 1 Platform	Website (Responsive, mobile-first)
Phase 2 Platform	Mobile App (Android + iOS)
Target Market	Bangladesh — nationwide
Languages	English and Bangla (bilingual toggle)

1.1 Business Lines

- Owners / Drivers — onboard cars and drivers to supply the fleet
- Corporate Clients — manage company transport, billing, and fleet usage
- One-Time / Solo Clients — book transport on demand without full registration
- Tours & Travels — structured tour packages (Phase 2, structure prepared now)

1.2 Business Objectives

- Onboard car owners and drivers to build supply
- Capture one-time and corporate client demand
- Enable corporate clients to monitor usage and billing independently
- Give owners/drivers full visibility of trips, ratings, and documents
- Give admin complete operational control with automation support
- Build a platform architected for future scaling (app, payments, tracking)

2. Core Principles

Principle	Description
Mobile-First	Majority of Bangladesh users access services via smartphone
Bilingual	English and Bangla — correct Bangla text, no Hindi content
Low Friction	Users experience value before being asked to verify or register
Progressive Onboarding	Long forms broken into steps; users can save and continue later
Automation-First Admin	Document verification automated via API/OCR; manual review only for exceptions
Scalable Data Structure	Database designed to support future mobile app, payments, live tracking
Security by Default	HTTPS, CSRF, rate limiting, RBAC, password hashing from day one
Bangladesh-Relevant Content	Only locally available vehicle categories and realistic tour destinations
Brand Consistency	GoRide logo used exactly as provided, green-and-white theme throughout

3. User Types & Personas

3.1 One-Time / Solo Client

A person who needs a single trip — airport transfer, event, day trip. May be tech-savvy or not. Primarily mobile. Wants speed and simplicity with no commitment to register.

Attribute	Detail
Authentication	OTP verification (at time of form submission, not before)
Key Actions	Fill booking form → OTP verify → submission confirmed
Pain Point Addressed	OTP moved to end of funnel; user fills form freely first

3.2 Corporate Client

A company transport manager or admin who needs ongoing fleet management, billing transparency, and the ability to submit new car requests without calling the GoRide team.

Attribute	Detail
Authentication	Login + Password (email or phone)
Key Actions	View fleet, track billing, submit car requests, view history
Unique Need	Billing visibility — outstanding amounts, next billing date, invoice download

3.3 Car Owner / Driver

An individual who owns one or more cars, or drives for an owner. May have limited digital literacy. Likely registers via mobile from the field (e.g. sitting in traffic after seeing a Facebook ad).

Attribute	Detail
Authentication	OTP for mobile verify, then Login + Password
Key Actions	Register (progressive), upload documents, manage cars, view trips/ratings
Pain Point Addressed	Registration split into quick signup (30 sec) + dashboard document completion
Admin Follow-Up	If profile incomplete after 3 days, admin can call the captured lead

3.4 Admin

GoRide internal staff who manage all platform operations — user approvals, document review, corporate account management, content updates, and billing.

Attribute	Detail
Authentication	Secure admin login with role-based access control (RBAC)
Key Actions	Approve/reject drivers, manage corporates, update content, review submissions
Scalability Requirement	Admin workload kept manageable via API/OCR automation on document verification

4. UX Flow — Key Improvements (v3.0)

This section captures the critical UX changes recommended in v3.0. These are not optional — they directly impact conversion rates and platform scalability.

4.1 One-Time Client Booking Flow (Revised)

Previous flow required OTP verification BEFORE the booking form. This creates high drop-off. The revised flow moves OTP to the end of the funnel.

Step	Action	Rationale
Step 1	User fills full booking form (destination, date, car type, etc.)	User experiences value first; builds psychological investment
Step 2	User clicks 'Request Car' / 'Submit'	User is at the point of commitment
Step 3	Popup appears: enter mobile number → OTP sent	User is motivated to complete; conversion rate significantly higher
Step 4	OTP verified → booking submitted → confirmation shown	Smooth, logical end to the journey

Spam/bot protection is handled via backend rate limiting and CAPTCHA — NOT by front-loading OTP before the form.

4.2 Owner / Driver Registration Flow (Progressive Profiling)

The previous flow required all documents, photos, and car details in one long form. This is unsuitable for mobile and causes high abandonment. The revised flow uses progressive profiling.

Phase	What's Collected	Time Required
Phase 1 — Quick Signup	Full Name, Mobile Number, Password, Role (Owner/Driver/Both)	~30 seconds
Phase 2 — Dashboard Entry	User lands in dashboard; sees visual progress bar (e.g. 'Profile 20% complete')	Immediate motivation
Phase 3 — Personal Details	NID, address, emergency contact — completed at own pace	5–10 minutes
Phase 4 — Car & Documents	Car details, registration papers, photos — uploaded step by step	10–20 minutes (can be done in multiple sessions)
Phase 5 — Admin Review	Admin notified when profile reaches completable threshold	Async

Car photo uploads should be presented as a visual checklist (Front View, Side View, Rear View, Interior) — each item gets a checkmark when uploaded, making the process feel manageable.

If a driver submits only Phase 1 (name + phone) and does not return within 3 days, admin can call the captured lead and offer support.

4.3 Admin Verification — Hybrid Automation Model

The previous design relied entirely on manual admin verification. This will not scale beyond early operations. v3.0 introduces a hybrid model.

Document Type	Verification Method	Manual Review When
NID (National ID)	API integration with Porichoy or equivalent BD NID gateway	API returns mismatch or error
Driving License	OCR reads expiry date and license number from uploaded photo	OCR confidence score is low / image blurry
Vehicle Documents (Tax Token, Fitness, Insurance)	OCR extracts key fields	OCR fails or fields unreadable
Corporate Documents (Trade License)	Admin manual review	Always (lower volume, higher value)

Estimated outcome: ~90% of driver profiles can be auto-approved or auto-flagged, reducing admin workload by more than half. Admin focuses time on exceptions, corporate accounts, and platform growth.

NOTE: NID/OCR automation is a CORE requirement in Phase 1, not a future feature. Without it, the admin panel will become a bottleneck as the platform grows.

5. Website Structure

5.1 Navigation / Header

- Logo — left aligned, original asset only, no alteration
- Menu: Home | About Us | Services | Car Fleet | Tours & Travels | Contact Us
- Language Toggle: বাংলা | English — top right
- Login Button — extreme right
- WhatsApp floating button — fixed position, all pages

5.2 Page Map

Page	Purpose
Home	4 user-type entry cards + statistics + sliders + testimonials
About Us	Company intro, mission, vision, trust points
Services	Airport pickup/drop, corporate, events (marriage, birthday, funeral), tours
Car Fleet	Bangladesh-relevant categories and example models
Tours & Travels	Destination packages (structure ready; content activated Phase 2)
Contact Us	Phone, WhatsApp, email, address, contact form, social links
One-Time Booking	Booking form → OTP → submission
Corporate Portal	Registration, login, dashboard, billing, car requests
Owner/Driver Portal	Registration (progressive), login, dashboard, car management
Admin Panel	Full platform management — users, documents, billing, content
404 Page	Bilingual friendly error page with navigation back to home
Maintenance Page	Bilingual page shown during deployments
Privacy Policy	Required for data collection and future GDPR-adjacent compliance

6. Homepage Requirements

6.1 Hero — 4 Entry Cards

Card	Label	Action
Owners / Drivers	Earn with Your Car	→ Owner/Driver registration flow
Corporate Clients	Manage Your Company Transport	→ Corporate registration/login
One-Time / Solo Clients	Travel Anywhere, Anytime	→ Booking form
Tours & Travels	Explore Travel Packages	→ Tours page

6.2 Homepage Additional Sections (in order)

- Counter / Statistics section: Satisfied Customers | Total Fleet | Destinations Covered | Corporate Clients — all admin-editable
- Rolling slider: Corporate client logos
- Rolling testimonials / reviews
- Rolling car brand/maker logos
- Rolling tours & travel destinations / packages
- Footer: Contact details | Social media links | Useful links | Privacy Policy link

7. Forms & Data Collection

7.1 One-Time Client Booking Form

Shown immediately — NO OTP required before this form. OTP triggered only on submission.

1. Full Name
2. Pickup Location
3. Destination
4. Journey Date
5. Journey Time
6. Trip Type — One-way | Round Trip | Hourly Rental | Airport Pickup | Airport Drop
7. Car Type — Sedan | SUV | Microbus | Premium | Economy
8. Number of Passengers
9. Luggage Requirement
10. WhatsApp Number (optional)
11. Special Notes
12. Preferred Language — English | Bangla
13. Submit → triggers OTP popup

System: Save to DB → notify admin → SMS confirmation (optional) → show thank-you message.

7.2 Corporate Client Registration

14. Company Name
15. Contact Person Name & Designation
16. Company Mobile Number
17. Company Email Address
18. Office Address & City
19. Preferred Billing Method & Payment Cycle (Weekly / Monthly / Other)
20. Service Type Needed (Office transport | Executive | Rental | Event | Airport)
21. Expected Number of Cars & Preferred Car Types
22. Required Service Area
23. Password & Confirm Password
24. Agreement Checkbox
25. Optional uploads: Trade License, Company Documents, VAT/TIN

7.3 Corporate Dashboard — Features

- Dashboard blocks: Active cars | Ongoing assignments | Billing summary | Next billing date | Outstanding invoices | Recent requests
- Car List: Model | Registration | Assigned driver | Status | Location
- Billing List: Invoice date | Due date | Amount | Paid/Unpaid | PDF download
- New Car Request Form
- Support / Issue Submission Form

7.4 Owner / Driver Registration — Progressive (3-Phase)

Phase 1 — Quick Signup (~30 seconds)

26. Full Name
27. Mobile Number + OTP Verify
28. Password + Confirm Password
29. Role Selection: Driver | Owner | Both

→ Account created. User enters dashboard immediately.

Phase 2 — Personal Details (completed from dashboard)

30. Father's / Guardian's Name (optional)
31. Date of Birth
32. WhatsApp Number
33. Email Address
34. NID Number — auto-verified via API
35. Present & Permanent Address, City, Area
36. Emergency Contact Name & Number

Phase 3 — Driver & Vehicle Details (completed from dashboard)

Driver Information:

37. Driver Full Name | License Number | License Expiry | Experience
38. Driver Photo | NID Upload | License Upload

Car Information (repeatable — owner can add multiple cars):

39. Car Model | Brand | Category | Registration Number
40. Seat Capacity | AC/Non-AC | Fuel Type | Color
41. Service Location / Operating Area
42. Airport Service? | Outstation Service?
43. Daily Rate | Airport Rate | Hourly Rate | Tour/Overnight Rate

Vehicle Documents (presented as visual checklist with checkmarks):

- Car Registration Paper
- Tax Token Copy
- Fitness Certificate
- Insurance Document
- Route Permit (if applicable)

Car Photos (presented as visual checklist — one upload per angle):

- Front View | Side View | Rear View | Interior | Additional

7.5 Driver Update / Replacement Form

44. Car Selection
45. New Driver Name | Mobile | License Number | Expiry
46. NID Upload | Driver Photo | License Upload
47. Effective From Date | Notes

7.6 Tours & Travels Inquiry Form (structure only — activated Phase 2)

48. Full Name | Mobile | Email
49. Destination | Travel Date | Number of Travelers
50. Package Type | Notes

7.7 Contact Us Form

51. Name | Mobile | Email | Subject | Message

8. Admin Panel

8.1 User Management

- Corporate Clients — view, approve, reject, edit, suspend
- One-Time Client Requests — view all submissions with filter/search
- Owners / Drivers — manage profiles, approval status, documents
- Admin-Created Users — create internal accounts with RBAC roles

8.2 Driver / Owner Approval Workflow

Status	Meaning	Trigger
Pending Review	Default after registration	Auto-set on submission
Auto-Approved	NID + docs verified via API/OCR	Automated
Verified	Manually approved by admin	Admin action
Need More Documents	Specific docs missing or unreadable	Admin flags
Rejected	Does not meet requirements	Admin action
Suspended	Temporarily removed from platform	Admin action

8.3 Document Management

- View and download all uploaded documents
- Check license / document expiry dates — flagged when near expiry
- Flag missing or unreadable documents
- OCR-extracted data shown alongside uploaded image for quick verification

8.4 Corporate Management

- Review and approve new corporate applications
- Update billing records — add invoice, mark paid/unpaid
- Generate or manually enter invoice data (PDF download available)
- Assign vehicles to corporate accounts if needed

8.5 Content Management (Admin-Editable)

- Homepage statistics counters
- Corporate logo slider
- Reviews / testimonials
- Car brand logo slider
- Tour destination packages

- Contact information

9. Recommended Tech Stack

Based on GoRide's requirements — bilingual, mobile-first, form-heavy, scalable — the following stack is recommended:

Layer	Recommended Technology	Rationale
Backend / API	Laravel (PHP)	Mature, excellent for form handling, file uploads, OTP, role management; large BD developer pool
Frontend	Next.js (React)	SEO-friendly, fast rendering, good for bilingual routing; or Vue.js if simpler preferred
Database	MySQL	Reliable, widely supported, good for relational data (users, cars, trips, billing)
Admin Panel	Laravel Nova or custom React admin	Full-featured; Nova reduces admin build time significantly
File Storage	AWS S3 or DigitalOcean Spaces	Scalable, secure document/photo storage with access control
Hosting	DigitalOcean Droplet or Vultr (BD region)	Low latency for Bangladesh users; cost-effective
OTP / SMS	SSL Wireless (Bangladesh-local) or Twilio	SSL Wireless preferred for BD numbers and cost; Twilio as fallback
Email	SendGrid or Amazon SES	Transactional email for registrations, billing, confirmations
NID Verification	Porichoy API (bd.gov gateway)	Official BD NID verification API
OCR	Google Vision API or Tesseract (open source)	Extract text from license/document photos
CAPTCHA / Bot Protection	hCaptcha or Google reCAPTCHA v3	Protects booking form and OTP trigger without blocking real users
Analytics	Google Analytics 4 + Facebook Pixel	Track conversions, user behavior, ad performance
CDN	Cloudflare	Speed, DDoS protection, caching for BD users

10. Security Requirements

All security requirements are mandatory from Phase 1. Security is not a future feature.

Requirement	Detail
HTTPS / SSL	All pages served over HTTPS; HTTP redirects to HTTPS automatically
CSRF Protection	CSRF tokens on all form submissions
OTP Rate Limiting	Maximum 3 OTP requests per mobile number per 10 minutes; IP-level limiting also applied
SQL Injection / XSS	All inputs sanitized; parameterized queries; output escaping throughout
Password Policy	Minimum 8 characters; bcrypt hashing; no plaintext storage
Role-Based Access Control (RBAC)	Admin, Corporate, Owner/Driver, One-Time Client — each role sees only permitted data and actions
File Upload Restrictions	Allowed types: JPG, PNG, PDF only; max file size enforced; files stored with randomized names
Session Management	Secure session tokens; session timeout after inactivity (configurable per role)
Admin Access	Admin panel at non-obvious URL; additional 2FA recommended for admin accounts
Data Privacy	Personal data (NID, photos, documents) accessible to admin only; not exposed to other users

11. SEO Requirements

SEO is essential for a service business to be discoverable in Bangladesh. All items below are required from Phase 1.

- Unique meta title and description for every page
- Structured data / schema markup: LocalBusiness, Service, FAQPage where applicable
- XML Sitemap auto-generated and submitted to Google Search Console
- robots.txt configured correctly (admin panel excluded from indexing)
- Bilingual pages use hreflang tags (en / bn)
- Canonical URLs set on all pages
- Open Graph tags on all public pages (for Facebook and WhatsApp link preview: title, description, image)
- Google Analytics 4 installed and configured from launch
- Facebook Pixel installed for ad tracking and retargeting
- Page speed targets: under 3 seconds on 4G mobile (Bangladesh average conditions)
- Image optimization: WebP format, lazy loading for sliders and car photos
- Core Web Vitals: LCP, CLS, FID targets met before launch

12. Bilingual Requirements

- English and Bangla toggle — only one language visible at a time
- Bangla font: Kalpurush preferred; fallback to another high-quality Bangla web font
- All Bangla text must be written by a native Bangla speaker — no machine translation for final content
- Zero Hindi characters permitted anywhere on the platform
- Language toggle usable on mobile (visible, accessible, not hidden in menus)
- Bilingual content applies to: all public pages, all forms (labels, placeholders, error messages), dashboard sections, email/SMS notifications, 404 and maintenance pages
- Developer must clarify: is bilingual content entry included in the scope, or provided by GoRide?

13. Design Requirements

Element	Specification
Primary Color	Green (#1A7A3C or brand-specified green)
Secondary Color	White
Accent	Minimal — avoid distracting colors
Card Style	Light shadow, clean borders, rounded corners
Typography	Clean sans-serif; Bangla font Kalpurush or equivalent
Icons	Clean line-art or flat iconography; no clip art
Logo	Original GoRide asset only; no stretching, recoloring, or alteration
Forms	Large input fields; clear labels; visible error states; Bangla-labeled fields
Buttons	Large, thumb-friendly on mobile; clear call-to-action text
Responsiveness	Fully responsive — tested on mobile (360px width minimum), tablet, desktop

14. Performance & Mobile Requirements

Bangladesh users predominantly access services on mobile with variable connection quality. Performance is a product requirement, not an afterthought.

- Target page load time: under 3 seconds on 4G (Bangladesh average)
- All images optimized and served in WebP format
- Lazy loading on sliders, car photo galleries, and logo sections
- OTP flow fully optimized for mobile — large input, numeric keyboard triggered automatically
- All forms fully usable on screens as small as 360px wide
- Dashboards remain functional and readable on mobile screens
- Language toggle visible and accessible on mobile without extra navigation
- WhatsApp floating button on all pages — fixed bottom-right corner
- Browser compatibility: Chrome (Android), Samsung Internet, Firefox, Safari (iOS), Chrome (Desktop)

15. Notifications

Trigger	Channel	Recipient
OTP Request	SMS (SSL Wireless)	User mobile
New one-time booking	SMS + Dashboard	Admin
New driver/owner registration	Email + Dashboard	Admin
Registration status change (Approved/Rejected/Needs Docs)	SMS + Email	Driver/Owner
New corporate application	Email + Dashboard	Admin
Corporate account approved	Email	Corporate contact
New corporate car request	Email + Dashboard	Admin
Document expiry reminder (30 days before)	Email + Dashboard	Driver/Owner + Admin
New contact form submission	Email	Admin

WhatsApp automation: optional in Phase 2 via WhatsApp Business API.

16. Database & Data Structure

The database must be designed to support current requirements and future expansion (app, payments, live tracking). Google Sheets may be used for export/reporting but must not be the primary data store.

Table / Entity	Key Fields
users	id, name, phone, email, role, status, created_at
otp_logs	id, phone, otp_code, attempts, verified_at, expires_at
one_time_bookings	id, name, phone, pickup, destination, date, time, trip_type, car_type, status
corporate_accounts	id, company_name, contact_name, phone, email, billing_cycle, status
corporate_car_requests	id, corporate_id, pickup, date, car_type, duration, status
owners	id, user_id, nid_number, nid_verified, address, status
drivers	id, user_id, license_number, license_expiry, experience, photo_path, status
cars	id, owner_id, driver_id, model, brand, category, reg_number, seat_capacity, status
vehicle_documents	id, car_id, doc_type, file_path, expiry_date, ocr_extracted, verified
trips	id, booking_id, car_id, driver_id, start_time, end_time, status
reviews	id, trip_id, rating, comment, reviewer_type, status
invoices	id, corporate_id, amount, due_date, paid_date, status, pdf_path
content_sliders	id, type (logo/review/tour), image_path, title, active
site_counters	key, value (customers, fleet, destinations, corporates)

17. Development Scope & Modules

Quotation should address each module separately with timeline and cost estimates.

Module	Contents
Module 1 — Foundation	Homepage, static pages (About, Services, Car Fleet, Tours, Contact), bilingual layout, header/footer, WhatsApp button, language toggle, 404 page, maintenance page, privacy policy page
Module 2 — Auth & OTP	Login/logout for all roles, forgot/reset password, OTP flow (revised — at form submission), session management, RBAC
Module 3 — One-Time Booking	Booking form, OTP popup trigger, submission, admin notification, SMS confirmation
Module 4 — Owner/Driver Registration	Progressive 3-phase registration, document uploads with visual checklist, car photo checklist, multi-car management, driver update form
Module 5 — Owner/Driver Dashboard	Profile, car management (add/edit/deactivate), trip history, ratings, document status, progress bar
Module 6 — Corporate Portal	Registration, login, dashboard (fleet/billing/requests), new car request form, support form
Module 7 — Admin Panel	User management, driver/owner approval workflow, document management (with OCR data display), corporate management, billing, content management, form submissions view
Module 8 — Automation & Integrations	NID API (Porichoy), OCR for documents, SMS gateway (SSL Wireless), email (SendGrid), CAPTCHA, Google Analytics 4, Facebook Pixel
Module 9 — Dynamic Homepage Content	Admin-managed counters, logo sliders, review sliders, tour package slider
Module 10 — Tours & Travels (Phase 2)	Tour package management, inquiry form, destination pages

18. Future Scope (Phase 2+)

Not required in current quotation unless developer wishes to indicate optional cost estimates.

Feature	Notes
Payment Gateway	SSLCommerz or bKash integration for online booking payments
Automated Trip Matching	Algorithm to match booking requests to available drivers/cars
Live Vehicle Tracking	GPS integration in mobile app
Mobile App (Android + iOS)	React Native or Flutter — same backend API
In-App / WhatsApp Chat	Direct communication between client and driver/admin
WhatsApp Automation	Booking confirmations, status updates via WhatsApp Business API
Rating Analytics	Dashboard for admin to analyze driver performance trends
Invoice Automation	Auto-generate and email PDF invoices on billing cycle
Pricing Algorithm	Dynamic pricing based on distance, car type, demand
Driver Training Portal	Onboarding materials, guidelines for new drivers

19. Developer Quotation Requirements

The developer's quotation must address each of the following items explicitly:

52. Total estimated development time — per module and overall
53. Technology stack — with justification for any deviation from Section 9 recommendations
54. Admin panel details — features included, UI approach
55. Security approach — how each item in Section 10 is addressed
56. OTP integration — which SMS gateway, cost structure, fallback plan
57. NID API integration — which gateway (Porichoy or equivalent), setup process
58. OCR integration — which service, accuracy expectations
59. Hosting / server recommendation — provider, specifications, estimated monthly cost
60. Bilingual content entry — is this included, or does GoRide supply translated strings?
61. File storage — where documents/photos stored, backup policy, access control
62. Maintenance and support terms — post-launch support period, bug fix policy
63. Revision policy — number of revision rounds included
64. Browser/device testing — which devices and browsers tested before handoff
65. Deployment process — staging environment, go-live checklist

End of Document

GoRide Bangladesh PRD v3.0 — Enhanced & Final | March 2026
